

What is Normal Aging & What is Disease?

Brownbag Lunch Series

Noon to 1:00 p.m.

at the

Landon Center on Aging, Room 200

March 28, 2007

Presenter: Jerry Old, MD,

As our population lives longer, the medical profession, and society in general, have a changing perception of what is normal aging and what is pathology. For example, is menopause normal, or a disease to be treated?

Especially in older adults, it is important to treat those diseases that are treatable, and to avoid the side effects of treatment in those things that are part of the normal aging process.

This presentation is positive, practical and entertaining. Humor is used to emphasize the major educational points.
